# Fostering School Connectedness

## Improving Student Health and Academic Achievement

**S**chool connectedness is the belief held by students that the adults and peers in their school care about their learning as well as about them as individuals. Students who feel connected to school are more likely to have a number of positive health and academic outcomes. This fact sheet answers questions about school connectedness and identifies strategies school districts and administrators can use to foster it among their students.

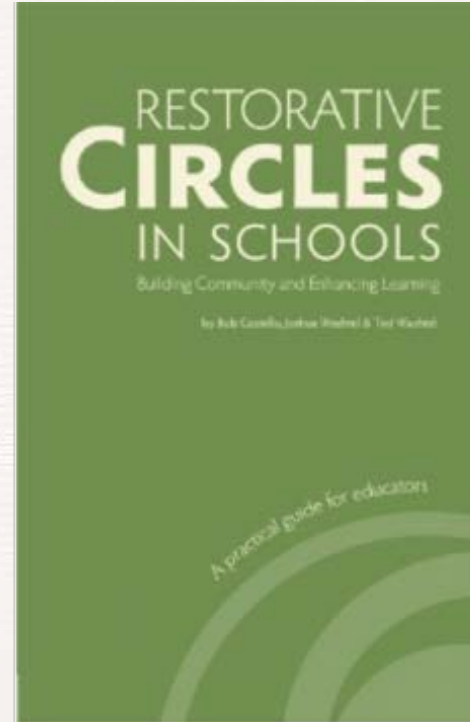

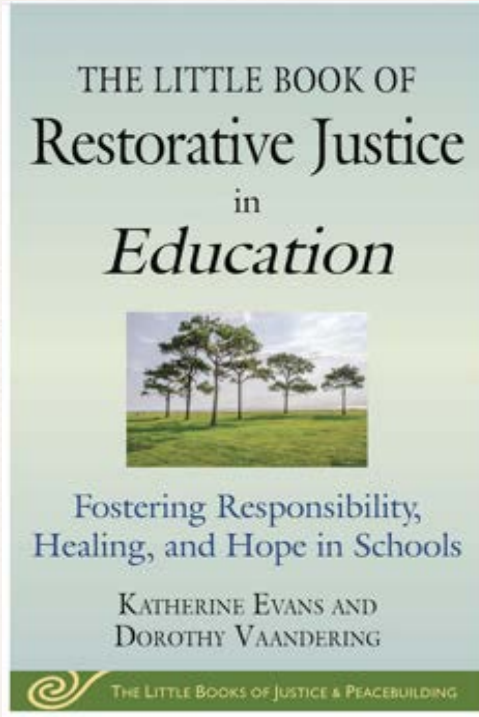

### ***Why is it important for students to feel connected to school?***

School connectedness is an important factor in both health and learning. Students who feel connected to school are

- More likely to attend school regularly, stay in school longer, and have higher grades and test scores.
- Less likely to smoke cigarettes, drink alcohol, or have sexual intercourse.
- Less likely to carry weapons, become involved in violence, or be injured from dangerous activities such as drinking and driving or not wearing seat belts.
- Less likely to have emotional problems, suffer from eating disorders, or experience suicidal thoughts or attempts.

# Steps You Can Take Now

X Identify the assessment tools you already have in place (fidelity & outcome).

X Determine if you can rely on those data?

- Are they being collected and reported consistently?
- Are they being used?

X In an Action Plan, identify what c (making sure you use data as much as possible in your work).

- Low Hanging Fruit?
- Capacity?
- Make the biggest impact?

You cannot do it all.
