Responding to Disasters: Principles and Considerations for Behavioral Health

Kira Mauseth, Ph.D.

Astrum Health, LLC Behavioral Health Sciences Consulting www.astrumhealthllc.org

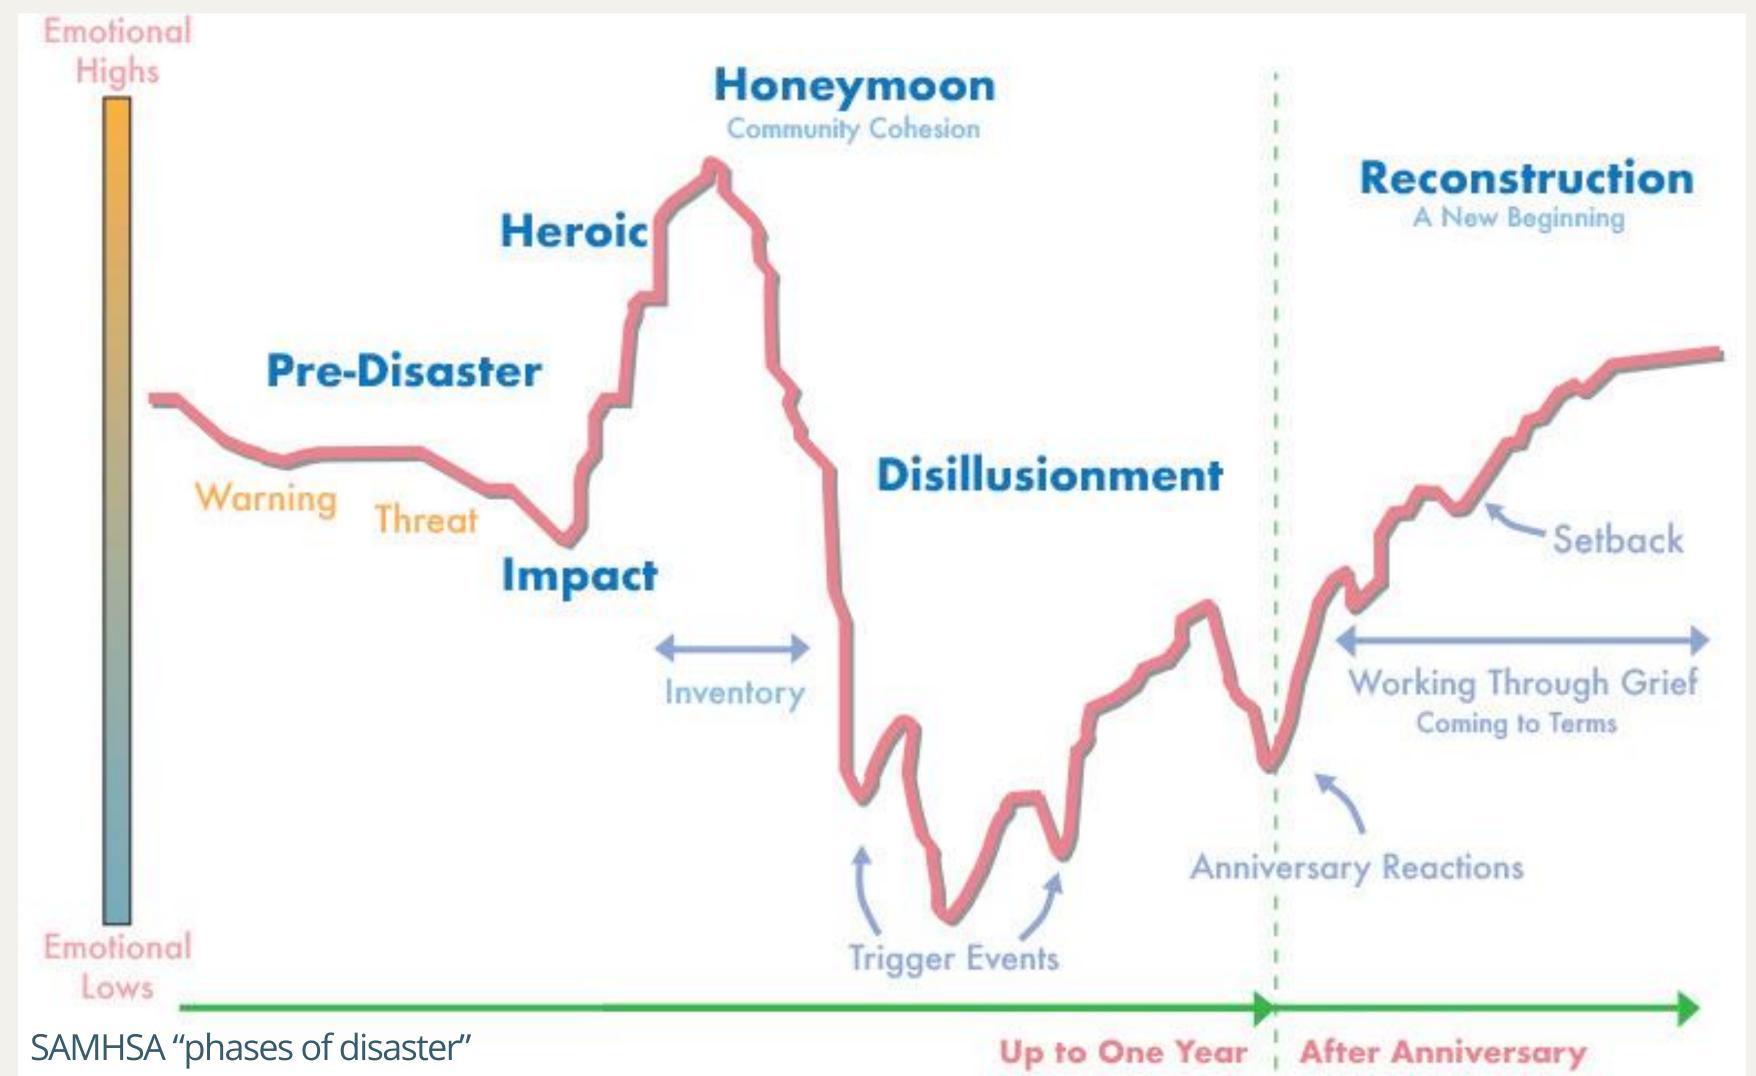

•

Agenda

Population Exposure Model Common Symptoms and Experiences Effective Interventions **Resilience Building**

Disaster phases and timelines

Phases of Disaster

Impact Phase

 0-48 hours postevent. Focus is on safety, communication, assessment of ongoing threat.

Rescue Phase

 O-1 week post – event. Primary goal is to adjust.
 Psychological issues: resiliency vs. exhaustion and orientation around what has happened.

Honeymoon Phase o1-4 weeks postevent. Community leaders are promising support, bonding and support is high. Sense of relief for survivors, Unrealistic expectations of recovery and denial of the impact.

Disillusionment Phase

o1 month to 9 months postevent (usually about 6-9 months post impact). Limits of disaster assistance become clearer; reality of the extent and impact of the disaster become evident.

Reconstruction & Recovery

•3 months to ongoing; Community on the way to healing, may continue for years; survivors begin to realize they will need to solve the rebuilding issues themselves, may develop sense of empowerment.

Impact Phase – 0-48 hours post event

Areas of Focus

Focus on psychological and physical safety
Immediate threat / risk reduction or mitigation
Acute survival and triage needs
Assessment of potential for future (ongoing) threat

Interventions

Psychological First aid
Shock recovery (heat, water, medical triage)

RESCUE PHASE: 0-1 week post event

Areas of Focus

- Adjustment to current circumstances
- Resilience vs. Exhaustion
- Processing reality of what occurred

Interventions

- - participation
- to do so.

 Present focus (here and now) No mandatory debriefing Space and time allowed (structurally) for processing experiences of those who want Communication and processing (not trauma therapy)

Honeymoon phase: 1-4 weeks post event

Areas of Focus

- High community bonding
- External supports are high / strong
- Expectations about recovery or denial of impact may be strong

Interventions

- Appropriately harnessing motivation to increase long-term resilience
 - Establishing med to long term behavioral health supports within the community or

 - structure
 - Training volunteers on psychological supports
- Re-prioritizing focus away from
 - "waiting until things get back to
 - normal" and on to empowerment for
 - intentional cultural shifts / change

Disillusionment phase: 1-9 months post event (usually about 6 mos)

Areas of Focus

- Limits of external assistance become clear
- Hopelessness around reality of event can set in
- Coming to term with losses

Interventions

- Active coping skills
- Sensory interventions
- support for survivors

• Harm reduction related to impulsive or high-risk behaviors Suicide intervention training &

Reconstruction and Recovery

Areas of Focus

- Active coping to internalize long term
- Post-traumatic growth

Interventions

 Active resilience building (Purpose, Connection, **Adaptability & Hope)** Meaning-making activities Connection to things larger than self (social interest)

Factors that influence the reconstruction / recovery pathway

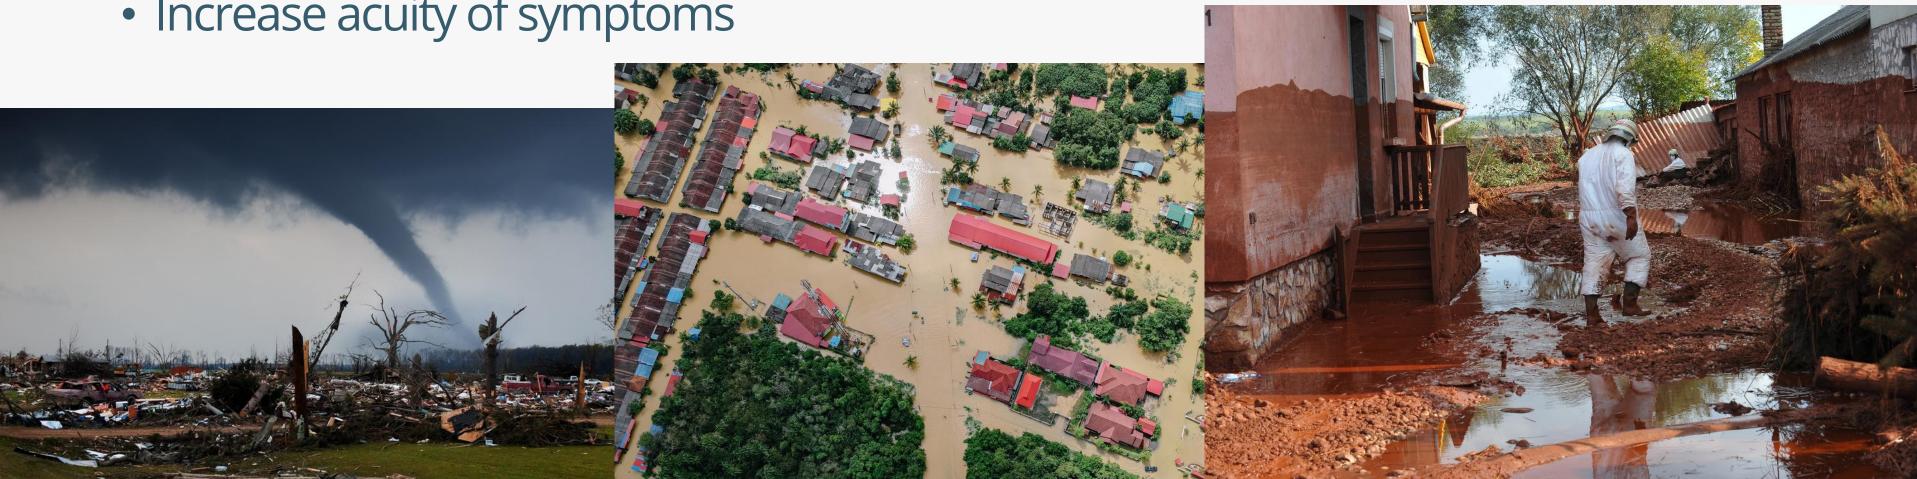

OR may result in the experience of a "disaster cascade" depending on the nature of the secondary impact

- Social marginalization
- Discrimination
- Economic status
- Access to resources and healthcare
 ACES (Adverse Childhood
- ACES (Adverse experiences)
- Previous experiences in disasters or critical incidents
- Sociopolitical climate
- Additional waves (such as with COVID) infection / illness / restrictions that result

Disaster cascades

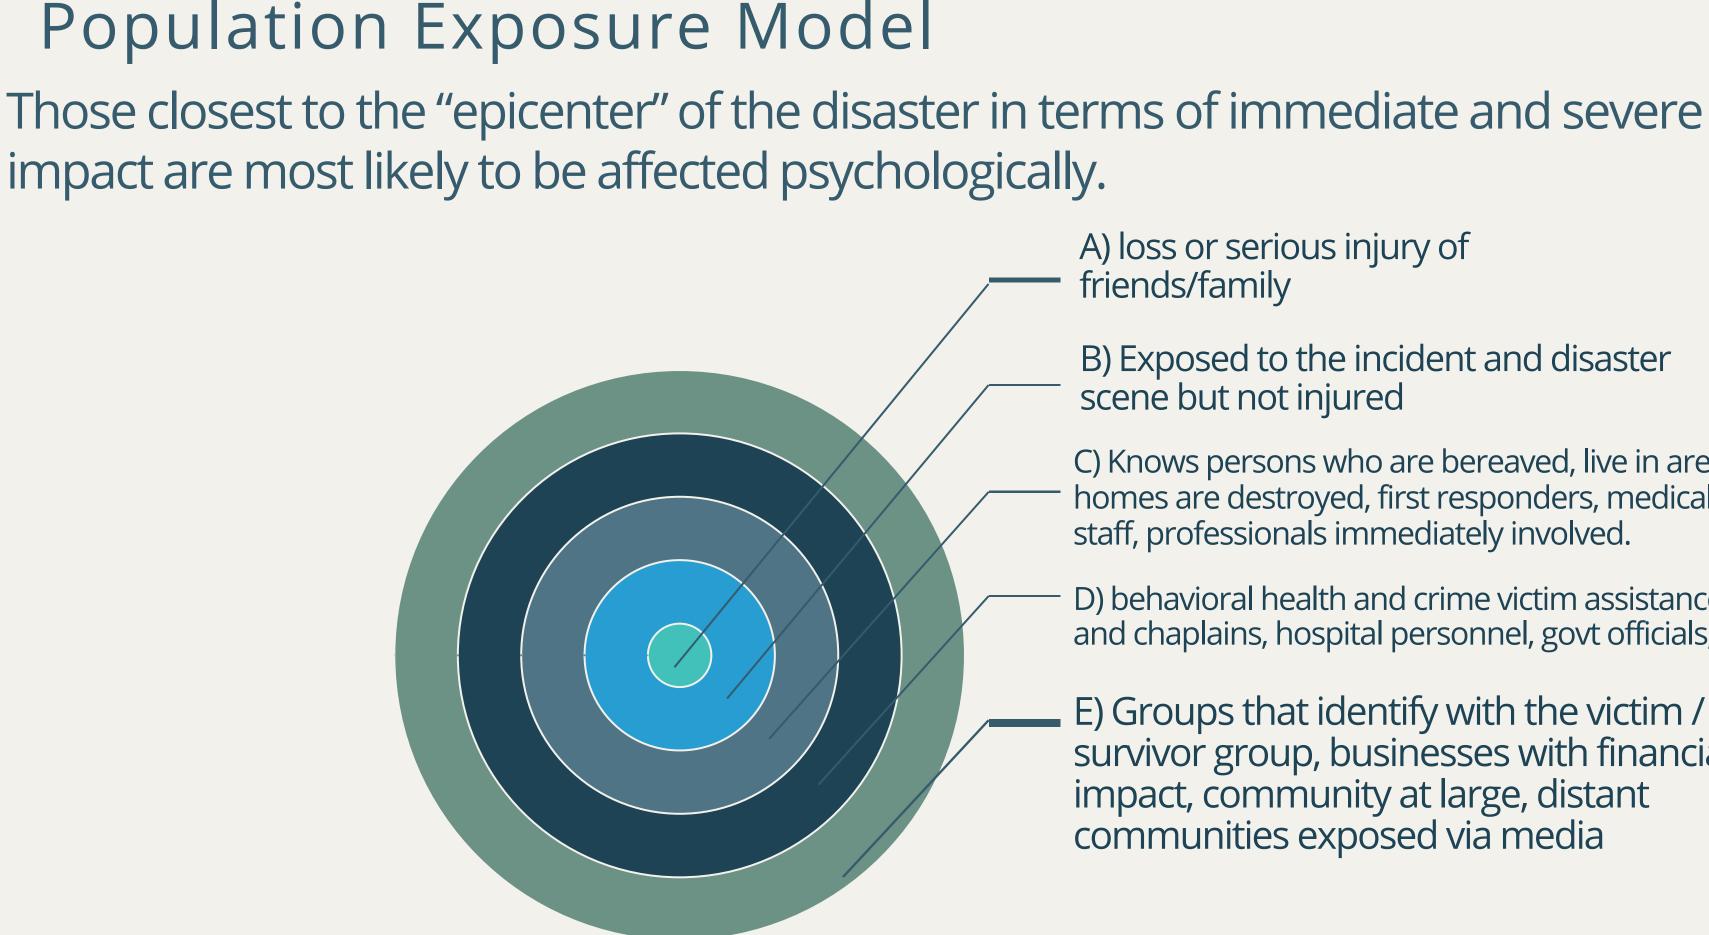

Defined as : more than one large-scale impact that occurs during the recovery window (18-24 months) from the original impact. Disaster cascades:

- Tax already depleted mental, emotional and physical resources
- Re-start the disaster recovery cycle, but at a lower baseline
- Extend the recovery cycle
- Increase acuity of symptoms

Trauma, Stress and Resilience

- All trauma is stressful, but all stress isn't necessarily traumatic
 - (ducks and birds)
 - Stress can build up over time
- The ability to function effectively CAN be compromised by either one
 - Emotionally, Cognitively, Behaviorally, Physically, Socially, Spiritually
- Long term moderate to severe stress affects the brain in ways similarly to traumatic events
 - Large-scale disasters as well as smaller-scale critical incidents
- Resilience can be developed intentionally, or can come about as a result of adverse experiences

Adapted from : U.S. Dept of Heatlh and Human Services. (2004). Mental Health Response to Mass Violence and Terrorism: A Training Manual. DHHS Pub. No. SMA 3959 Rockville, MD; Center for Mental Health Services, Substance Abuse and Mental Health Services Administration. p. 11.

A) loss or serious injury of friends/family

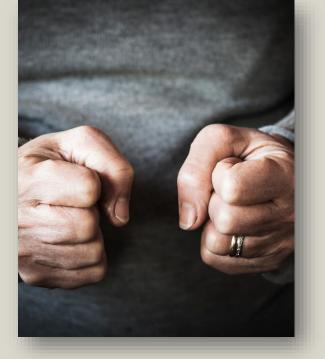

B) Exposed to the incident and disaster scene but not injured

C) Knows persons who are bereaved, live in area where homes are destroyed, first responders, medical examiner's staff, professionals immediately involved.

D) behavioral health and crime victim assistance, clergy and chaplains, hospital personnel, govt officials, media

E) Groups that identify with the victim / survivor group, businesses with financial impact, community at large, distant communities exposed via media

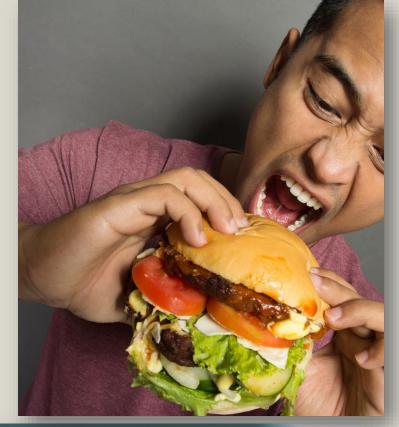

COMMON EXPERIENCES AND CHALLENGES

Cognitive, Physical, Behavioral, Social, Emotional, Spiritual

Structures of Note:

Prefrontal cortex:

higher-level functioning, planning, organization, details, filtering

Limbic system:

emotion, impulse, pleasure and safety, memory, defense, protection (fight, flight or freeze). Includes the amygdala & hippocampus

We are all still (at least slightly more) limbicly activated.

Best Practices in Disaster Behavioral Health

In general:

Don't self-deploy!

1

2

3

4

5

Have a family

etc.

- Be prepared at home walk the talk
- communication plan
- Include your workplace in your planning
- Educate yourself about local resources - CERT, Trainings,

In a response / activation / deployment:

2

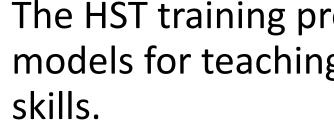

Be willing to do anything that needs doing within your skill set and competence Let go of traditional ways of providing services or reaching goals

Be willing to connect - with your colleagues / coworkers / team members and with survivors

Continuum of care options for disasters and critical incidents

Emergency Care Evidence-Based Psychological Treatment **TF-CBT/CBT Additional MH Screening Health Support Team** Training **PsvSTART** Psychological Triage **Psychological First Aid**

This minimizes reliance on outside support, allows for the training materials to be adapted for a variety of cultures and languages, and creates an embedded behavioral health support network within the community.

Health Support Team

Disaster Behavioral Health Training and Response

HST, LLC © 2023 Dr. Kira Mauseth & Dr. Tona McGuire The HST training program is based on educational models for teaching behavioral health information and

Designed for the purpose of training community members in how to provide basic evidence-based behavioral health support to their families, friends, and community organizations in an ongoing, sustainable way.

Prioritizing flexibility, mutual learning, and cultural adaptation

- Respect (gender / education)
 - Identification is important
- Social cues

 - Stoicism
- Pathology, customs, rituals, categories / labels

Cultural norms:

- Feedback from 'students' / learners & translators
- Reception of ideas

- Communication
 - High and Low context cultures
 - Working with translators
 - Translation v. transliteration
 - Establishing relationships

Module 1: Introduction to Health Support Team, Disaster Response & Recovery

Module 2: HST Skills and Techniques: The Supportive Relationship, Communication and Listening

Module 3: HST Goals: Listening to Referral

Module 4: HST Toolbox: Relaxation, Stress Reduction, and Thinking Strategies

Module 5: Health Support Team Member Boundaries and Resilience

The Health Support Team[©] Program

Module 3: HST Goals: Engaging with Key Issues from

The HST process includes four steps:

LISTEN & LEARN

Learn about the person and listen to the problem using supportive communication and active listening techniques. (Module 2) (

Foster resiliency by supporting the person in finding external resources and internal strengths **OR** Refer them to someone if needed. (Module 3)

PROVIDE A TOOL

Offer them a tool to help them cope, such as a relaxation technique or a thinking strategy.

(Module 4)

EMPHASIZE HOPE

Let the person know you are there for them, and that you are an encouraging, supportive resource for them when needed.

OFFER SUPPORT

HST APPLIED

- 400+ trained in Haiti (75 as trainers)
- 200+ trained in Jordan (Jordanians, Palestinians, Iraqis & Syrians, including group of all female trainers)
- 200 + trained in Poland
 (Polish relief workers, educators, Ukrainian
 - educators, Ukrainian refugees) 400+ First Responder
- 400+ First Responders and community members (CERT, MRC and others) in the US
 500+ trained through WA Dept of Health as part of COVID response

Effective Interventions

Active Coping

- Sensory engagement (sight, touch, taste, smell or sound)
- Movement
- Structure / schedule
- Goals that are the right scale / scope
- Culturally relevant and appropriate suggestions!!!!
 - Do your homework if you are working in an area where you are unfamiliar with norms.

Active Listening - be aware of high and low context cultures

Non-Verbal

Clarifying Questions

Express **Empathy**

Communication

Open Ended questions

Seek to deeply **UNDERSTAND** (not to fix or problem solve)

More please: in a healthy way

Serotonin

- Movement / exercise
- Sun exposure
- Massage
- Hot / cold showers
- What makes you feel comfortable and secure?

Dopamine

- Movement / exercise
- Task achievement (to-do lists, long term goals as well)
 Creating something – music, art, writing
 What is *fun or rewarding* for you personally?

Resilience Development

Purpose

What motivates you? What is important to you? What are you striving for, or what helps you move forward?

Adaptability

How can you make adjustments that are needed, to time, space, fun, expectations, etc? How can you respond with curiosity?

Hope

How can you shift your thinking from 'threat' to 'challenge' and what are the <u>realistic</u> opportunities you have?

Connection

To whom or what are you connected? Connection can be anything that prevents isolation.

BOTTOM LINE:

- Prepare yourself, your family and your business at home. • Start by "walking the preparedness talk"
- If you are interested in doing disaster relief, get training, get certified. • CPR, CERT, MRC, FEMA, etc.
- Do some personal inventory about your level of comfort with ambiguity, difficult physical conditions, roles, and tasks
- Educate yourself on best practices in disaster response behavioral health support.
 - Learn more about Psychological First Aid (PFA), Health Support Team (HST) and other programs that specifically are aimed at providing direct service or training to those affected by disasters and critical incidents.
