

Learning Community Group Ideas from Session 1 – Recovery-oriented practices

- peer and EBP's such as WHAM
- adapting client needs such as a “care closet,” e.g., having access to clothes, shoes, personal care items
- practicing mock interviews for jobs
- connecting clients to resources
- going to where the clients are (services offered through mobile/outreach)
- offering individualized supports
- Co-responder program
 - Preventing arrests and allowing individuals to achieve a stable recovery through a link with the system
 - A wrap around service
 - Certain residential services which provide support
- Treatment court: people had access to services but navigation was difficult didn't have support to get to court and appointments, all of these people are within the program to be able to navigate their issue
 - Can allow them to see the doctor, get off from work, there is a treatment team which can understand the individual's needs
 - Promotes recovery rather than automatically
