

# Assistive Technology in Post-Secondary Education Settings: Tools for Eliminating Barriers and Optimizing Success

Are you supporting individuals in returning to post-secondary education? If so, you may be interested in attending this training on assessing the need for and identifying the different types of assistive technology and accommodations available for students with mental health conditions in post-secondary settings.

Assistive technology and accommodations can significantly improve academic success; however, accessing these supports can be cumbersome. Additionally, there are many types of assistive technology devices/tools that students can use for academic success that range on a continuum from low to high tech.

We will define assistive technology and accommodations in the post-secondary setting as well as explore the types of accommodations and assistive technology used to improve performance in post-secondary school settings. Various types of assistive technology and apps will be demonstrated. A representative from Disability Rights' Assistive Technology Advocacy Center will also be available to provide an overview of relevant legislation and how to access assistive technology. We will utilize a service conceptualization framework and peer/expert discussions to apply the skills learned. If you wish, please come prepared to discuss an individual participating in services (Please no names or other identifying information).

## Information & Registration

September 14, 2023

1:00-2:30 pm ET
